6th and Walnut Streets  
Philadelphia, Pennsylvania 19106

Dear Ms. Gordon:

USE OF TYBOUTS CORNER LANDFILL  
BY DU PONT'S GLASGOW SITE

The information herein is furnished in accordance with your request. From 1968-1970, Tybouts Corner Landfill was used by the Glasgow Site to dispose of general trash and garbage. Du Pont understood the landfill to be publicly-owned and used a permitted hauler, Stanley Twardus, 912 New Chatham's Road, Newark, Delaware.

The material consisted of waste from lunchrooms, restrooms, offices, small quantities of building material, packaging material (paper, cardboard, glass, plastic), and reject analytical test packs.

The reject packs are composed of surlyn film, styrene and surlyn headers, and trace amounts of reagents. The packs are rejected for physical and/or chemical reasons. The quantity of packs was approximately eight to nine tons per year, with the surlyn and styrene components comprising greater than 95% of the weight.

Du Pont believes the presence of the reject packs in the landfill does not constitute an environmental hazard because the reagents are present in very small quantities and are tightly bound within the plastic packs. We expect reject packs will not be considered hazardous wastes under the characteristics promulgated by EPA on May 19, 1980.

July 22, 1977

Du Pont no longer has any records pertaining to its use of the landfill. To the extent possible, we will be glad to provide any additional information you request in this regard.
